

# FlexiGlue Ultra

## Installation Manual

MATERIAL NEEDED

Included

Not Included

Caulking Gun

If the nozzle is not already cut, cut it according to the diagram.

### 1A

#### Foam Acoustic Panel

Apply the glue on the back of the acoustic panel, near the edges and in the central area. Do not wait longer than 10 minutes after applying the glue to attach the panel to the wall.

### 1B

#### EPS (rigid) Acoustic Panel

Apply three lines of glue on the back of the acoustic panel. Do not wait longer than 10 minutes after applying the glue to attach the panel to the wall.

2

Place the panel on the suitably chose position on the wall. Once in the desired place, press firmly against the wall for 15 seconds.

!

Use the same process to install the panels on the ceiling. You may need to use ceiling supports to hold the panels in place while the glue dries.

!

To ensure that you maximise the strength of the glue, don't make any adjustments to the panel after bonding

Wall and ceiling surfaces should be examined prior to installation, ensuring they are clean, smooth, and dry. If you have unpainted gypsum board surfaces, these should be primed with a drywall primer (or another material manufactured especially for the purpose), to equalize the absorption between the gypsum board face paper, joint compound, and skin coating materials. You should then apply the paint, and allow air circulation in order to dry the paint within the time frame specified by the paint manufacturer. Please ensure the paint is dry before installing the acoustic panel. Make sure the room has all the necessary conditions to receive the acoustic panels. After you apply the glue on the back of each acoustic panel, please ensure you hold the acoustic panel against the wall the required time (mentioned above), and ensure it stays fixed in place. This method is also applicable to ceiling installations.
