Installation Manual

✓ MATERIAL NEEDED

Included

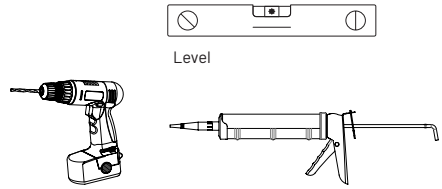

Rubber Cap

Magnet

Screws

Round Metal Part

Not Included

Level

Drill

FlexiGlue

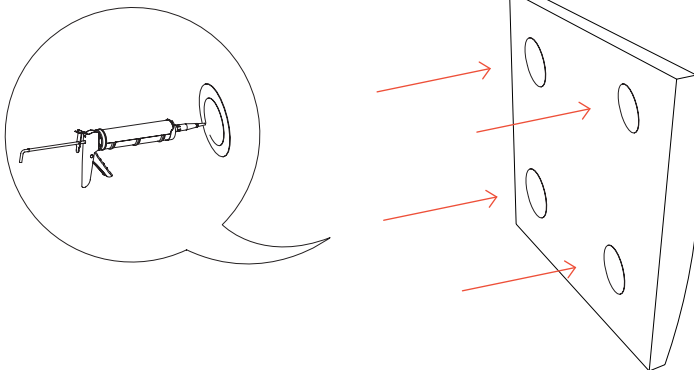

Depending on the type of product, its size, weight, and the place of installation, you will need to define the number of magnets to be applied.

As a general rule, for any panel installation, we recommend using 4 magnets, one in each corner.

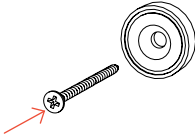

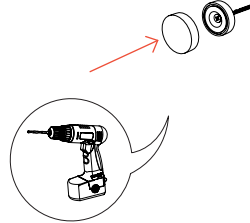

1

Glue the round metal part to the back of your Vicoustic acoustic panel you want to attach to the wall.

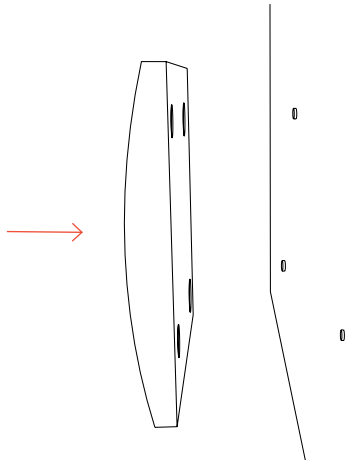

2

Screw the magnet into the wall. Then attach the rubber cap to it, in order to prevent the Vicoustic panel from sliding down.

**3****3**

Push the Vicoustic Panel against the magnet.
